Governor Hickenlooper Visits Neumann Systems Group, Inc.

Colorado Springs, CO (August 22, 2011) – Neumann Systems Group, Inc. (NSG) announced today that Governor Hickenlooper visited and reviewed NSG's technology and business plan. Also present for the visit were Mr. Jerry Forte, CEO and Mr. Bruce McCormick, Chief Energy Services Officer from Colorado Springs Utilities.

Governor Hickenlooper and Mr. Forte reviewed NSG's patented NeuStream™ absorber technology and its rapid progress toward a full commercial system for desulfurization operations at the Drake Power plant. Colorado Springs Utilities has invested \$21mm in NSG for pilot plant testing which lasted through December 2010. During the first half, of 2011 NSG has made significant progress towards design of a full scale commercial system and procurement of long-lead equipment. Construction at the Drake plant for the NeuStream™-S desulfurization system is expected to start in May 2012 with initial testing of the system starting at the end of 2013.

Governor Hickenlooper and Mr. Forte also reviewed NSG's progress toward a carbon capture system using advanced NeuStream™ absorber technology. A .1 MW lab-scale unit is currently being checked-out at the Drake plant in preparation for testing at the Energy and Environmental Research Center in North Dakota. The U.S. Department of Energy's Office of Fossil Energy recently announced that NSG was selected for a \$7,165,423 grant for Carbon Capture to scale-up the lab-scale unit. Other applications of the NSG technology were briefly discussed.

NSG is a privately-owned, 60-person, advanced technology company focused on commercializing gas-liquid contactor systems for emissions control and other applications. Other potential market areas for NSG products include chemical production, pharmaceuticals, energy production, water purification, and oil refining.
